

Transform any mobile or tablet into a payment terminal with **phos**

The merchant's portal to accepting contactless payments on any device.

Unlock the full potential of mobile devices

Transact fast, easy and secure payments with our softPOS solution. Phos leverages any smart device by allowing card acceptance and digital wallet payments without any additional hardware.

Phos by Ingenico

Phos offers an off the shelf app that allows partners to go straight to the market with a functioning app. This app has the phos look and feel regarding text and font having the well known phos brand and logo.

A second option is to have the phos app look and feel, but integrating the customer logo.

Your own app with a fast and cost effective route to market

The White Label product allows phos to provide our app custom designed to match the partner or merchant's brand identity, look and feel.

Once the design assets have been created, the app is available via the Google PlayStore to download directly under the partner's own brand.

Contactless payment on your own app

If you already have an existing app, then through your in-house development teams, the phos SDK will allow you to incorporate accepting contactless payments into your own app.
