

Unlocking the full potential of Android

for the new world of payments and commerce

ingenico

Discover the AXIUM Platform

A reliable, versatile point-of-sale solution built to last and to inspire endless possibilities

Built on Ingenico's extensive experience in the industry, Ingenico offers the most comprehensive and cohesive Android Smart POS portfolio in the market.

Stylish, high-end build quality and durability at the heart of the design.

The AXIUM devices are the perfect investment for any business looking to stay ahead in the market.

Our AXIUM range has been designed to cover all market segments, from countertop to portable, from mobile to retail PIN Pad and self-service. With different form factors, screen sizes and accessories, we serve all types of business and all payment scenarios. Whatever their requirements, clients can find the ideal POS solution and reduce their

fleet management costs with AXIUM. The dark colour and paint-free cases of the devices simplify cleaning and prevent fading. The AXIUM DX8000 and AXIUM EX8000 flagship models boast larger screens, high performance and scratch resistance, with enhanced resilience against external factors.

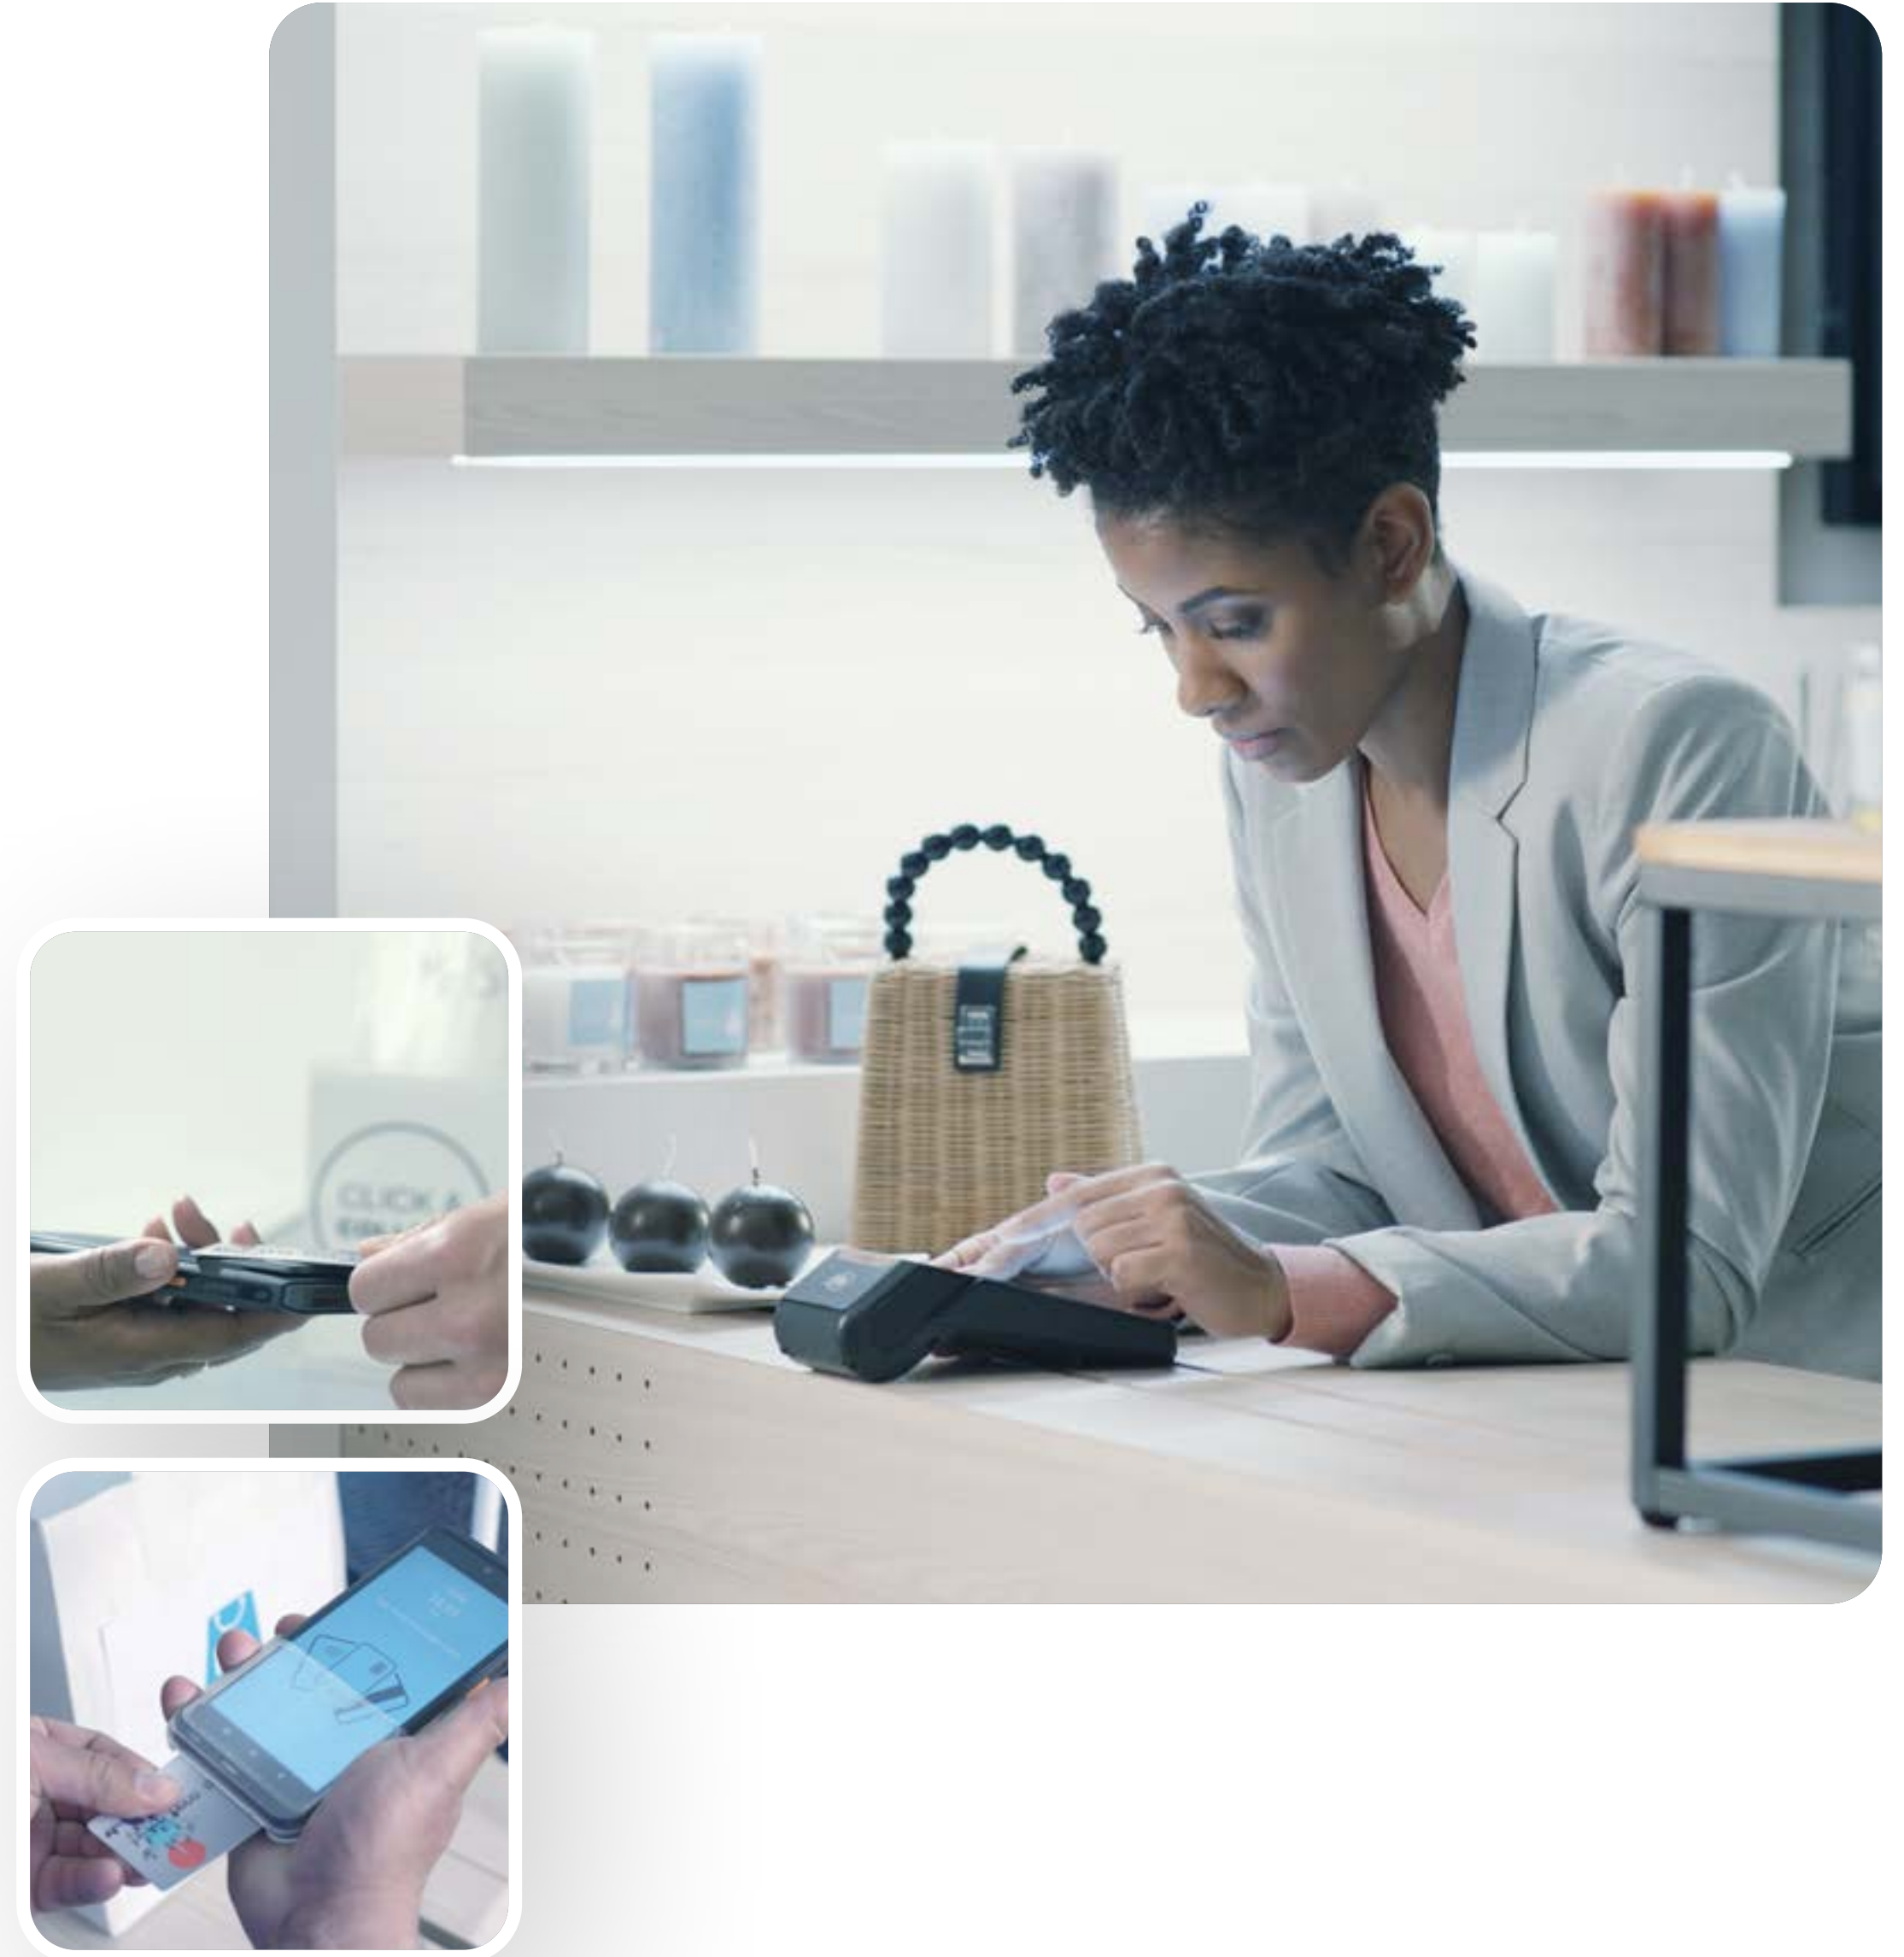

AXIUM has been designed with longevity in mind, ensuring customers receive the best return on their investment.

Our portfolio is future-proof, thanks to the combination of the AXIUM Operating System with high-end hardware features.

The large memory and display configurations support future advances, while the long-lasting battery life ensures reliable, continuous operation. On the software front, Ingenico's AXIUM solution offers a consistent and long-term strategy. The AXIUM platform is designed to be application-driven thanks to devices with large screens (up to 6 inch), powerful memory configuration

(up to 3+32G), an always evolving AXIUM OS, the App Store, and much more. The AXIUM platform offers an unbeatable combination of durability, high-quality hardware and forward-thinking software. AXIUM is the solution of choice for businesses looking to invest in a cutting-edge, reliable and long-lasting payment acceptance solution.

" We have found in our most recent deployments of Ingenico's new AXIUM platform that the solution is incredibly fast! "

« We have many enterprise-level clients focusing on high-volume environments, where it is all about speed and the customer experience. We've found that our clients who are using AXIUM are reporting more significant performance increases than any of the other technologies we have used in the past. Further, we are regularly seeing a reduction in transaction times from ~7 seconds down to as low as 1.2 seconds. In fact, in a time and motion study conducted by one customer, they have estimated an overall business saving of approximately 5,000 hours of checkout time a year as a direct result of the switch to AXIUM. They are citing significant reductions in queues at checkout and POS. Customer satisfaction is up and they are loving the larger "pin-sharp" screen which they also use for at-checkout advertising, loyalty and rewards. »

Datamesh, Payment solution provider in Australia

Enabling the new world of commerce

Running entirely on Android, the AXIUM platform supplies you with an innovative POS range, an extensive payment applications portfolio and a future-proof and secure operating system. Customer Care

Outsource your estate management to one single partner and control the cost of solution delivery with Terminal as a Service.

" Help small business owners compete more effectively with larger businesses "

«The large-screen on the AXIUM DX8000 also creates an opportunity for merchants to engage customers at the point of sale with graphical images and messaging or even with ads to create a new revenue stream. These types of features can enhance experiences for consumers and also help small business owners compete more effectively with larger businesses that have invested in developing these capabilities at the point of sale.»

Moneris, Payment processor in Canada

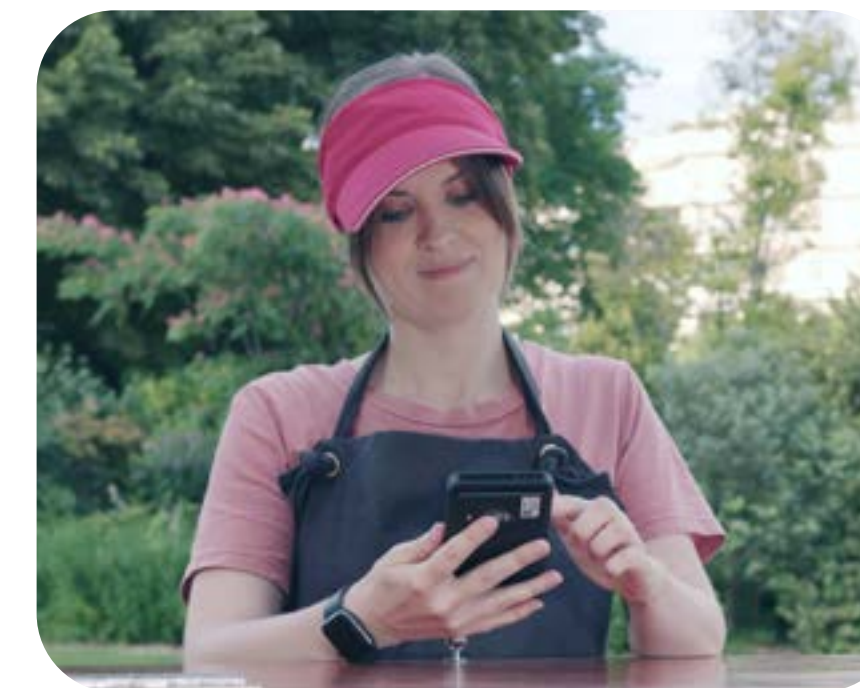

Performance and digital experience for everyone

Rely on Ingenico's worldwide expertise in payment applications

Benefit from our unmatched expertise, gained from developing thousands of payment applications over four decades, to speed-up your AXIUM fleet time-to-market. We can provide payment applications tailored to customers' specific needs, relying on local and global Android payment application development experts, backed-up by our Android Competency Centre.

Android Competency Centre

- Supports all payment application development projects in all regions with Android dedicated skills
- Develops and maintains a generic Android payment framework to accelerate payment application time-to-market

Business enablement

Create value-added services for merchants and retailers

With AXIUM business enablement, the wide community of developers on Android can easily implement any business application.

Our dedicated set of APIs allows single integration with the payment world for all devices. Payment providers can create their own application stores, and their own catalogues of apps and distribute them in a few clicks. This allows small merchants and retailers to access a broad set of business applications on demand from their terminal to better serve their customers. Through powerful vertical applications and back-office services, they can better drive their business by connecting the payment device directly to their accounting or inventory systems, and monitoring their business through analytics and reports. Merchants can also improve customer loyalty by providing advanced services such as digital receipt management, couponing or financing.

Deploy new commerce services on AXIUM devices instantly with the Appstore.

axium – Unlocking the full potential of Android

ingenico

Maximise device availability and business security

Our cloud-based estate management solution allows you to organise, manage and monitor your fleet with one single platform.

With the AXIUM mobile device management capabilities, you can not only track every device anywhere in the world, but also use geofencing to ensure your terminals are where they should be at all times. With remote helpdesk, your maintenance service is optimised as on-field intervention is restricted to specific operations. The remote keys injection solution, eSign solution (digital signature of applications), and P2PE solution, ensure that your estate always complies with the latest regulations and standards.

Manage your fleet across the entire lifecycle with advanced monitoring and security capabilities.

Peace of mind guaranteed

Ingenico customer care services can either be accessed as needed or form part of a complete Terminal as a Service package.

You choose how we support your business – from à la carte support to a fully outsourced service that includes consulting and design, repair and maintenance and end-of-life management.

Experience unparalleled peace of mind with Ingenico's Terminal as a Service model and AXIUM.

Our customer care services are always at your fingertips, ready to assist whenever you need it. Choose from accessing them on-demand or as part of a comprehensive package that includes everything you need for seamless payments acceptance.
